

# The Level 2–3 Workbook

Every Do-it worksheet from The Income Portfolio and Leverage & Real Estate, plus the Level 2 and Level 3 capstone briefs and sign-off pages.

---

Covers lessons 2.1–2.8 (The Income Portfolio) and 3.1–3.10 (Leverage & Real Estate)  
Figures as of July 2026 · refresh from primary sources before relying on a stale number  
Not financial advice — this workbook teaches evaluation, not tips

## How to use this workbook

---

Level 2 tunes the machine you deployed in Level 1: dividends without traps, REITs read like a landlord, a peso bond ladder, honest yield decomposition, a sized speculative sleeve, a real portfolio with an IPS, a complete tax map, and pre-committed behavior rules. Level 3 opens the leverage tier: bankability, loans priced head-to-head, Gallinelli underwriting, the condo trap and its escapes, foreclosures, high-yield formats, titles and friction, operations, and RE tax. Fill each worksheet in order — lesson 2.6's dashboard assumes 2.1–2.3 already exist on paper, and lesson 3.4's underwriting template is reused by every lesson after it.

---

### THREE RULES

---

1. **Use real numbers, not placeholders.** Pull actual PSE EDGE filings, actual bank rate sheets, actual listings — a worksheet filled with round guesses teaches nothing.
2. **Every figure carries a date.** Where this workbook prints a rate or yield it is dated as of July 2026. If you're filling this in later, pull the fresher number from the source cited in the matching lesson.
3. **Carry your numbers forward.** The 2.6 dashboard, 3.4 underwriting template, and 4.4/4.7 dashboards (next workbook) all reuse what you build here. Keep this workbook.

### CONTENTS

---

2.1 · Dividend basket screen

2.2 · REIT scorecard grid

2.3 · Bond ladder design

2.4 · Yield decomposition

2.5 · Speculative sleeve constitution

2.6 · Portfolio construction + IPS + dashboard

2.7 · 8%-vs-graduated + filing calendar + tax map

2.8 · Pre-mortem + trigger rules

**L2 Capstone** · Brief + rubric + sign-off

3.1 · Leverage rebuild + IPS rules

3.2 · CIC pull + bankability plan

3.3 · P4M three-ways financing comparison

3.4 · Full Gallinelli underwriting grid

3.5 · Condo trap + five escapes

3.6 · Foreclosure lifecycle checklist

3.7 · Bedspace / corporate / Airbnb comparison

3.8 · Title due-diligence checklist

3.9 · Operations systems checklist

3.10 · RE tax election worksheet

**L3 Capstone** · Brief + rubric + sign-off

Dividend basket screen

Pull five dividend histories from PSE EDGE, compute the three discriminator numbers, and classify each grower / stable payer / trap candidate.

| Name                | 5-yr dividend history (per share)                                  | Payout ratio | 5-yr div. growth | Current yield | Classification |
|---------------------|--------------------------------------------------------------------|--------------|------------------|---------------|----------------|
| TEL                 | <div><div></div><div></div><div></div><div></div><div></div></div> |              |                  |               |                |
| MER                 | <div><div></div><div></div><div></div><div></div><div></div></div> |              |                  |               |                |
| GLO                 | <div><div></div><div></div><div></div><div></div><div></div></div> |              |                  |               |                |
| Bank (BDO/BPI/MBT)  | <div><div></div><div></div><div></div><div></div><div></div></div> |              |                  |               |                |
| Your curiosity pick | <div><div></div><div></div><div></div><div></div><div></div></div> |              |                  |               |                |

Classify: **grower** (payout <70%, rising) · **stable payer** · **trap candidate** (yield >8%, payout >100%, falling price).

THE TAX IDENTITY, WITH YOUR OWN NUMBERS

Planned sleeve size ₱\_\_\_\_\_ at an assumed 6% yield:

|                                                            |  |
|------------------------------------------------------------|--|
| Annual dividend, gross                                     |  |
| 10% final tax bill on that dividend                        |  |
| Same cash flow via 0.6% STT self-made sales (for contrast) |  |
| Same cash flow via a 20%-taxed time deposit (for contrast) |  |

Sleeve policy (feeds the 2.6 IPS)

Target size: ₱\_\_\_\_\_ · max weight per name: \_\_\_\_\_% · standing rule: "Any holding whose payout ratio crosses 100% or whose dividend is cut gets re-underwritten within a month — no averaging down on a broken thesis."

REIT scorecard grid — AREIT vs MREIT vs CREIT

Pull the latest quarterly report + investor presentation for each from PSE EDGE. No summaries — live filings only.

|                                                      | AREIT | MREIT | CREIT |
|------------------------------------------------------|-------|-------|-------|
| Dividend yield (TTM ÷ price)                         |       |       |       |
| Spread over the 10Y bond (~5.8–6.8%)                 |       |       |       |
| Occupancy %                                          |       |       |       |
| WALE (years)                                         |       |       |       |
| Top-tenant / top-5 share of rent                     |       |       |       |
| Sector exposure                                      |       |       |       |
| Sponsor + injection pipeline (last 2 yrs, committed) |       |       |       |
| Net-of-tax yield (× 0.90)                            |       |       |       |

**One-line landlord verdict per REIT:**  
"I am being paid \_\_\_\_\_ over the risk-free rate to own \_\_\_\_\_ buildings that are \_\_\_\_\_% full with \_\_\_\_\_ years of contracted rent, standing behind \_\_\_\_\_."

**Pick + five-sentence defense (including which two you rejected and why):**  
\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

Ladder design + hand-computed YTM

INVENTORY THE RAW MATERIAL

| Guaranteed-layer asset | Maturity date | Amount |
|------------------------|---------------|--------|
|                        |               |        |
|                        |               |        |
|                        |               |        |
|                        |               |        |

DESIGN FIVE RUNGS

| Yr | Instrument | Amount | Gross yield | Net yield (after 20% or tax-free) | Maturity | Planned use |
|----|------------|--------|-------------|-----------------------------------|----------|-------------|
| 1  |            |        |             |                                   |          |             |
| 2  |            |        |             |                                   |          |             |
| 3  |            |        |             |                                   |          |             |
| 4  |            |        |             |                                   |          |             |
| 5  |            |        |             |                                   |          |             |

HAND-COMPUTED YTM (ONE FXTN QUOTE)

Coupon income + pull-to-par, annualized

Stress-test the longest holding: paper loss if yield rose 2 points ( $\approx 2 \times$  remaining years):

"What I would actually do: "

Yield-product decomposition

|                                                                |  |
|----------------------------------------------------------------|--|
| Target product (QYLD or your most recent pitch)                |  |
| Headline distribution yield                                    |  |
| NAV at inception vs today (dividends not reinvested)           |  |
| % of last year's distributions = return of capital             |  |
| 5-yr total return (product) vs 5-yr total return (naked index) |  |

**Decomposition verdict:** "The \_\_\_\_\_% yield is really: \_\_\_\_\_% genuine strategy income, \_\_\_\_\_% my own capital returned, paid for by \_\_\_\_\_% of surrendered total return vs the index. After 25% withholding: \_\_\_\_\_."

**Standing rule (feeds the 2.6 IPS)**

"Any yield above my 2.2 REIT spread benchmark triggers a written decomposition before purchase. If I am reinvesting the distributions, I have disqualified myself as this product's customer."

## Sleeve constitution + tenant audit

|                                                                  |  |
|------------------------------------------------------------------|--|
| Cap ( $\leq 10\%$ of portfolio), written percentage & peso value |  |
|------------------------------------------------------------------|--|

Standing rules: funded only from surplus after the FOO rungs · never topped up to average down · wins above cap get skimmed into the core at rebalancing.

### CRYPTO DILUTION AUDIT

| Holding | Nominal staking yield | Network inflation | Real yield | Realistic drawdown |
|---------|-----------------------|-------------------|------------|--------------------|
|         |                       |                   |            | -70-90%            |
|         |                       |                   |            | -70-90%            |

"I hold this as speculation sized for total loss; the yield is a kicker, not a reason." — can you write it honestly? ☐ Yes ☐ No — resize

### SEC RITUAL (ONE LENDING PLATFORM)

|                          |                                                                                                                               |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| <input type="checkbox"/> | SEC registration checked                                                                                                      |
| <input type="checkbox"/> | Certificate of Authority checked (SEC lending moratorium in force since Nov 2021 — only pre-moratorium CoA holders are valid) |

| <input type="checkbox"/> | Net-vs-MP2 hurdle math computed                                                                                               |

### TUITION-PRICING WORKSHEET (IF AN EXPERIMENT TEMPTS YOU)

|                                                                      |  |
|----------------------------------------------------------------------|--|
| Real all-in capital (not advertised)                                 |  |
| Realistic monthly net (industry-map range, not the franchise deck)   |  |
| Payback in months                                                    |  |
| Hours/week of attention                                              |  |
| "Total loss of ₱___ would be acceptable tuition" — write it or don't |  |

## Target weights + lab + one-page IPS + dashboard

### TARGET-WEIGHT TABLE

| Sleeve                               | Target weight | USD / PHP split | Deviation from template, one sentence why |
|--------------------------------------|---------------|-----------------|-------------------------------------------|
| Global index core                    |               |                 |                                           |
| PH dividend / REIT income            |               |                 |                                           |
| Guaranteed layer (MP2/RTB/TD ladder) |               |                 |                                           |
| Speculative sleeve                   |               |                 |                                           |
| Cash / emergency fund                |               |                 |                                           |

### THE LAB (BACKTEST)

|                                                                 |  |
|-----------------------------------------------------------------|--|
| Max drawdown of my equity/guaranteed mix (US proxies for shape) |  |
| Worst year                                                      |  |
| Peso value of max drawdown at today's portfolio size            |  |
| Honest reaction to that number                                  |  |

### ONE-PAGE IPS (DRAFT ALL SIX SECTIONS)

|                                                |  |
|------------------------------------------------|--|
| 1. Purpose                                     |  |
| 2. Target weights (from above) + USD/PHP split |  |
| 3. Contribution rule                           |  |
| 4. Rebalancing bands                           |  |
| 5. The never list                              |  |
| 6. Trigger rules (appended fully in 2.8)       |  |
| Date signed                                    |  |

### DASHBOARD (UPDATE MONTHLY)

| Sleeve                                                                             | Current value | Current vs target weight (drift) | TTM income, net of tax | Action required?         |
|------------------------------------------------------------------------------------|---------------|----------------------------------|------------------------|--------------------------|
|                                                                                    |               |                                  |                        | <input type="checkbox"/> |
|                                                                                    |               |                                  |                        | <input type="checkbox"/> |
|                                                                                    |               |                                  |                        | <input type="checkbox"/> |
| <b>Net portfolio yield vs. two hurdles</b> (MP2 7.12% tax-free; index ~7–9% total) |               | <input type="checkbox"/>         |                        |                          |

8%-vs-graduated crossover + filing calendar + tax map

RUN YOUR OWN CROSSOVER

| Route                                                                     | Computed tax |
|---------------------------------------------------------------------------|--------------|
| 8% of (gross – ₱250,000)                                                  |              |
| OSD-graduated (60% of gross taxed at graduated rates) + 3% percentage tax |              |
| Itemized-graduated (if your books support it)                             |              |

Winner + one sentence on when it flips (expense ratio? VAT wall?):

|---|------|
| 1 |      |
| 2 |      |
| 3 |      |
| 4 |      |
| 5 |      |

QUARTERLY BEHAVIOR REVIEW (CALENDAR IT)

|                              |  |
|------------------------------|--|
| Savings rate vs. target      |  |
| Fixed burn vs. last year     |  |
| Drift vs. bands              |  |
| "The goalposts moved / held" |  |

## THE BRIEF

1. **The portfolio itself, deployed at your chosen sizes** — global index core on its schedule (1.5–1.6), the PH dividend basket screened through the 2.1 discriminator, the REIT pick from your 2.2 three-way scorecard, the peso ladder designed in 2.3, and the speculative sleeve inside its 2.5 cap. Every yield-bearing product you *declined* along the way counts as work done, not work skipped.
2. **The one-page IPS** (2.6) — purpose, target weights per sleeve plus the USD/PHP split, contribution rule, rebalancing bands, the never list, and the 2.8 trigger rules appended, dated.
3. **The dashboard** (2.6) — current vs target weight per sleeve, trailing-12-month income per income sleeve **net of tax**, and net portfolio yield tracked against the two hurdles: MP2's tax-free rate and the global index's expected total return.
4. **The completed tax map** (2.7) — every holding → its tax (rate, final or schedular) → its form (or "final — none") → its date, agency row and any foreign-income row included, no blank cells. Plus your 8%-vs-graduated crossover computation and this year's filing calendar, in your actual calendar.

| Verdict | Standard                                                                                                                                                                                                                                                                                                                                                                                                   |
|---------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Not yet | Any inconsistency between the three artifacts and the live portfolio — a holding missing from the tax map, a dashboard yield quoted gross where net belongs, actual weights outside the IPS bands with no rule-triggered action noted, or an IPS that names sleeves the portfolio doesn't have (or vice versa). The gate is <i>coherence</i> : the documents must describe the portfolio you actually run. |
| Passing | Portfolio, IPS, and tax map exist and are <b>consistent with each other and with reality</b> — every live holding appears in all three, every yield is net-of-tax, every weight is inside its band (or its drift is flagged with the rule-prescribed action), and the filing calendar covers every form the tax map names.                                                                                 |
| Strong  | Passing, <b>plus the written pre-mortem from 2.8</b> : one page, eighteen-months-from-now voice, on how this exact portfolio hurts you in a 2008 — peso drawdowns per sleeve at current sizes, the agency-revenue cut included, ending with the repairs list and at least one repair already made.                                                                                                         |

| Building-vs-land split (tax-declaration ratio) |  |
| 25-yr straight-line annual deduction           |  |
| Effect on crossover, yrs 1–5 vs 15–20          |  |

## One real deal, fully underwritten

Copied verbatim from the course's practice page. The gate: fully underwrite one real PH property deal end-to-end — financing, DSCR, cash-on-cash, taxes — and defend the go/no-go.

### THE BRIEF

Pick **one REAL listed property** — a foreclosure/acquired asset (3.6) or an RFO unit (3.5) — currently listed, with a real asking price you can cite by URL or listing reference. Produce the full underwriting package:

1. **Acquisition + friction costs** — asking price vs zonal value (3.8), the negotiated/discount-tier price, plus all entry costs: DST, transfer tax, registration, diligence costs, arrears exposure, and — if occupied — the honest ejectment/cash-for-keys budget with a timeline.
2. **Three financing quotes** (3.3) — Pag-IBIG, one bank, and in-house or cash as the third column; live rates this month, MRI included, amortization tables attached.
3. **The NOI build-up with cited line items** (3.4) — three rent comps minimum, actual dues, actual RPT, honest vacancy, management priced even if self-managing. The 50%-rule screen alongside the line-item version.
4. **The metrics block** — cap rate, yield-on-cost, GRM, cash-on-cash and DSCR per financing column, payback, and a 10-year IRR with the exit priced net of ~8–9% friction (3.8).
5. **The repricing stress test** (3.1) — every financing column recomputed at +3% after its fixing period, plus –10% rent and +2 months vacancy rows. DSCR verdicts marked against the  $\geq 1.25$  rule.
6. **Tax treatment** (3.10) — regime this deal's income files under next January, combined-income crossover attached, VAT-line check, withholding note if corporate tenant, year-1 depreciation schedule.
7. **The exit plan** — named buyer profile, realistic price, months on market, friction that leaves. "I'll just sell" is not an exit plan.
8. **The go/no-go memo** — two pages maximum. State the escape (3.5's five) this deal uses, by name and number. Argue both sides and sign a verdict.

*If the verdict is go, whether and when to actually bid remains entirely your decision. The deliverable is the package, not the purchase.*

### THE RUBRIC

| Verdict        | Standard                                                                                                                                                                                                           |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Not yet</b> | Any unsourced number — a rent with no comp, dues "estimated" when the admin was one message away, a financing rate from a 2022 video, a stress test skipped, or an exit priced gross of friction.                  |
| <b>Passing</b> | Every number in all eight sections sourced and dated, the metrics block computed from your own template, the stress test run on every financing column, and the go/no-go memo signed with the deal's escape named. |
| <b>Strong</b>  | Passing, <b>plus the no-go case argued as hard as the go case</b> — steelman both, before the verdict.                                                                                                             |

Go/no-go memo (two pages maximum)

|                                    |  |
|------------------------------------|--|
| Property / listing reference       |  |
| Escape(s) used, by name and number |  |

Argue the go case, then the no-go case with equal rigor, then sign a verdict.

Verdict: GO / NO-GO — signature / initials \_\_\_\_\_ Date \_\_\_\_\_

# Sign-off

The capstones have you underwrite and, where you choose to, deploy real money. The course teaches evaluation — every deployment decision, and every amount, is yours.
